

SCA SCAnalyzer Software Module Enhances Global Foodservice Logistics Performance Evaluation Budgeting Process

Results

- Standardized process for budget, actual and variance reporting using one source of record for budgeting information across all suppliers and business units
- Realized ROI of 6X – 12X
- Accelerated quarterly reporting cycle from 35 to 19 days
- Provided senior management with visibility into annual budget numbers two months earlier, allowing time for a collaborative and iterative approach that resulted in a more accurate budget for the forthcoming year
- Helped DCs to identify improvement opportunities by providing benchmark KPIs (On-Time %, Warehouse Productivity, Off-Load Rate) which allowed management to compare system averages and similar DCs
- Team worked collaboratively with the same data and assumptions, eliminating back and forth correspondence and leading to faster decision making

Challenge

A global leading foodservice retailer's vast distribution network consisted of more than 30 unique Distribution Centers (DCs) that serviced a wide range of products and shipped to more than 13,000 points of delivery. The DCs were regionally managed which led to a system of disparate processes and reporting tools that management used for evaluating performance and budgeting across DCs. It was clear the company needed a collaborative, enterprise-wide process for planning, forecasting and tracking and responding.

The client's Budgeting and DC Performance Review process included other gaps:

- Comparing and evaluating DCs proved to be difficult
- Resulting budgeting process was conducted manually
- Multiple data sources
- Time consuming rounds of data collection, analysis, review and discussions between supply chain managers, DCs and others
- Difficulty tracking and monitoring budgeted costs and identifying variance drivers

“SCAnalyzer empowered managers to identify potential cost variances and take appropriate and timely corrective action.”

About SCA Technologies

Since 1999, our predictive cost modeling, optimization and cost management capabilities have **helped our clients reduce their delivered cost of goods sold (COGS) by 3% - 5%, saving over \$250 million each year. Our clients include Fortune 500 companies such as McDonald's, NCR, Church's Chicken, Bama Companies, Baldinger Bakery and H. J. Heinz.** Led by a management team of highly experienced professionals from prominent companies like Xerox, Mobil, JD Edwards, PWC, Heinz and Cartesis, SCA is the only company that combines an integrative and collaborative approach with a powerful *"total cost-to-serve"* methodology. SCA Technologies is headquartered in Pittsburgh, PA with offices in Chicago, IL and Delhi, India.

Solution

SCA Technologies, the leader in predictive cost management software solutions, was engaged to facilitate the design, development and implementation of a new budgeting process. We implemented **SCAnalyzer**, the cornerstone of **SCAplanner™**, our hosted enterprise software for cost management and cost optimization that deploys best practice collaborative business processes to manage cost of goods and margins.

- **Business Process Re-Engineering:** SCA consultants worked closely with the organization's field managers, distributors and other stakeholders to conduct a full Business Process Re-Engineering (BPR) review to understand the company's business needs, current budgeting processes and potential gaps. The team worked collaboratively to identify and build the appropriate process mapping, and prototypes.
- **System Implementation:** System Implementation Services are used for the business process transformation initiative of our customers. Once system specifications from the BPR were validated and agreed upon, SCA software engineers configured the software to meet the client's needs. SCA staff then provided training that afforded full understanding and clarity of the system's process, reports and software.

SCAnalyzer provided the company with enterprise-wide budget analysis around financial and operational factors enabling collaboration with the different business units. The software allowed supply chain managers to quickly create a solution that met evolving business needs by evaluating historical trends and benchmarks. In addition, SCAnalyzer empowered managers to identify potential cost variances and take appropriate and timely corrective action.
